Note:- This estimation has been done in selected forest areas and Protected Areas other than the Tiger Reserves. Wild Animals living in rest of the State have not been counted. Waterhole population estimation is a direct sighting record and only those animals are counted, which visited the waterholes during the exercise. Due to rainfall during the period of estimation (on date 01.05.2026) there was availability of water at several places where no observation teams were present and hence some animals might not have been sighted. This technique is useful to examine trends of population and create awareness and interest in the public about wild animals.
